
With KEYMACRO you can create your own keyboard macros. KEYMACRO enables you to type one or more special words, such as passwords, meeting requests, or reminders, whenever you press a hotkey. Using KEYMACRO you can also create a custom menu with many special items. With the built-in tool you can define a keyboard shortcut and specify any word or menu item to be included. When you press the hotkey assigned to the keyboard shortcut the hotkey is replaced with the specified text or menu item. In addition, the software allows you to define hotkeys for actions that you commonly perform. You can assign hotkeys for displaying hidden, minimized, or active windows or start programs in the background. You can also use the tools to help you create custom hotkeys for Internet Explorer, Office applications, Windows media players, and any other program that you need. The hotkeys you create with KEYMACRO are saved in the application so you can use them when you reboot or restart the computer. KEYMACRO 6.3.0 features the following new enhancements: * Support for Win7 x64 and 32bit versions * Improve document export tool * Improve the look of options window * New options window * Edit hotkeys feature * New spell checker * Menu editor * Macros from the default program * Find and replace in the help file * Lots of bug fixes and new features KEYMACRO License * Legal notice: The program "KEYMACRO" is freeware.
