Shree hindi movie hd downloadShort-term effects of the anti-Parkinson agent harmaline in the cat: changes in neuromuscular transmission. Single unit recordings and functional bioelectrical recordings of the neuromuscular junction were obtained from the soleus muscle of the decerebrate cat. Following this, the effect of the peripheral anti-Parkinson agent harmaline on unit activity, quantal content and miniature end-plate potential frequency was recorded. Harmaline at 10 micrograms/kg i.v. caused the disappearance of a number of spontaneously occurring muscle-fibre impulses, a diminution of neuromuscular transmission that was reversed by 1 h after injection. These findings suggest that harmaline acts at the motor nerve terminal by altering the influx of Ca++ through the voltage-dependent Ca++ channels of the presynaptic membrane.// // ProjectItem.cs // // Author: // Ruben Roussillon // // Copyright (c) 2009-2011 Ruben Roussillon // // Permission is hereby granted, free of charge, to any person obtaining // a copy of this software and associated documentation files (the // "Software"), to deal in the Software without restriction, including // without limitation the rights to use, copy, modify, merge, publish, // distribute, sublicense, and/or sell copies of the Software, and to // permit persons to whom the Software is furnished to do so, subject to // the following conditions: // // The above copyright notice and this permission notice shall be // included in all copies or substantial portions of the Software. // // THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, // EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF // MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND // NONINFRINGEMENT.
