Data Communications And Networking, Fifth Edition, Behrouz A Forouzan in PDF, EPUB, DOC Format.Q: Read data from file line by line and pass to a thread I need to read a file line by line and pass the line read to a thread. In details The file is something like this: [name] [serial] [voltage] [current] [pressure] I need to read each line and store in a string array of some of the strings of the line. I need to store the strings where the name is the first string in the array. So the first string in the string array will be the first string from the first line and so on. Then I need to pass to another thread the string array that is returned by the read. I did something like this but doesn't work. while ((line = file.ReadLine())!= null) { if (line.IndexOf(...) == -1) { line.ToString(); //line get's passed to thread as value } } A: Based on your updated requirement, the code will look like this: var name, serial, voltage, current, pressure = null; if(line.IndexOf("[" + name + "]")!= -1) { name = line.Substring(0, line.IndexOf("[" + name + "]")); //do what you want with name } if(line.IndexOf("[" + serial + "]")!= -1) { serial = line.Substring(0, line.IndexOf("[" + serial + "]")); //do what you want with serial } if(line.IndexOf("[" + voltage + "]")!= -1) { ba244e880a
