

The macro windows have a toolbar with standard options. Capabilities Keyboard recording, Macro recording Simple interface Slow typing speed Syntax errors Tools for editing Recording macros Keyboard recording Keyboard recording can be combined with Mouse recording. The macros are recorded with standard mouse buttons as well as the modifier keys. The recorded keyboard strokes are stored on disk as a binary file. Armed with a mouse and a keyboard recording tool, you can record any mouse click or keyboard stroke. The macros can easily be edited. You can even use the mouse to simulate button clicks or to type text into any text field. The macros are stored as a binary file. Each macro contains the information about the recording duration, the buttons that were pressed, the amount of keystrokes, modifiers etc. All data can easily be edited. The recorder can also filter the data by parameters (sensitivity etc.) and by time. By using the text editor, the data from the macro can easily be replaced with the desired value. The macro file and the text file are saved into the same folder and have the same file name. The file extension.mac is used for this file format. Macro file Default values Mouse recording Mouse recording is used to press the mouse buttons. Clicking the left mouse button simulates the left mouse button. The right mouse button simulates the right mouse button. The scroll wheel simulates the middle mouse button. The modifier keys can be used to simulate the mouse buttons: Shift simulates the left mouse button with the shift key pressed Control simulates the middle mouse button with the control key pressed Windows simulates the right mouse button with the windows key pressed Macro recording can be combined with mouse recording. The modifier keys are not used. Instead, the mouse button is pressed by the keyboard recording tool. Macro recording Macro recording can be combined with keyboard recording. The modifier keys are not used. Instead, the mouse button is pressed by the keyboard recording tool. In the main window, the following sections are visible: The Keyboard section is used to record the keyboard strokes. If you press the left mouse button, a recording will start. If you press the right mouse button, the recording will end. The Mouse section is used to record mouse
