03 02 03" How can I achieve the output I want? A: You can use :last_index for this. It will give the last index of the array:
 res.send({'title':mylist[:last_index]}) Or with for: res.send(mylist.slice(0, -1)) EDIT: To show the first index use :first_index
 res.send({'title':mylist[:first_index]}) EDIT2: You can also use :first or :last as i mentioned in the comments.
 res.send({'title':mylist[:first]}) Q: Calculate radius of convergence of power series of $\sum a_n z^n$ and its real roots Question:
 Let $a_n = \frac{1}{n!}$. Find radius of convergence of series $\sum a_n z^n$ and its real roots. Work: To find radius of
 convergence we calculate: $\limsup_{n \rightarrow \infty} \sqrt[n]{|a_n|} = \limsup_{n \rightarrow \infty} \frac{1}{\sqrt[n]{n!}} = \limsup_{n \rightarrow \infty} \frac{1}{n^{\frac{1}{n}}} = \frac{1}{e}$ So radius of convergence is $R = \frac{1}{e}$. $\sum_{n=0}^{\infty} a_n$
 $z^n = \frac{1}{z} e^z = \sum_{n=0}^{\infty} \frac{1}{n!} z^n$ Here radius of convergence of e^z is equal to 1 and radius of
 convergence of $\frac{1}{z}$ is equal to ∞ . How to calculate real roots of the following equation?
 $f(z) = e^z + \sum_{n=0}^{\infty} a_n z^n = 0$ (these roots are given in the answer) My attempt: I rewrite the original equation:
 $e^z = \sum_{n=0}^{\infty} \frac{1}{n!} z^n$ f3e1b3768c
