
KEYMACRO allows you to use macros in Windows applications. Instead of typing the same thing over and over again, you can define a macro. A macro is a set of keystrokes that can be used as many times as you want. Macros speed up typing and make it easier to press buttons you often need. With the KeyMacro software, you can quickly record a series of keystrokes and save them as a macro. You can then use this macro to make repeated actions quickly. KeyMacro supports a variety of popular Windows applications, including Microsoft Word, Excel, Internet Explorer, Outlook, Access and many others. Using the KeyMacro software, you can easily perform the following functions: - Type text automatically - Type text in multiple lines - Insert text from the clipboard - Make the selection of text - Open the link in a new window - Scroll through multiple lines of text - Go to any position in the document - Paste text in the selected position - Save text in the clipboard as a file - Make a spelling correction - Find words in the document - Highlight text - Select the picture file in the folder - Go to any position in the file - Copy the file to the clipboard - Close the file - Open the file in the viewer - Find any words in the file - Delete or add words to the dictionary - Find the line number - Find the line number of the current position - Find the line number of the last position - Reorder the lines - Highlight the line - Select the lines - Toggle bold, italic or underline on a line - Bold the line - Italicize the line - Underline the line - Make all the lines the same color - Make all the lines the same color - Change the color of the line - Make the first line bold - Make the first line italicized - Make the first line underlined - Insert line numbers - Go to the first line of the document - Go to the next line of the document - Go to the previous line of the document - Go to the last line of the document - Open the file as a template - Open the file as a template - Open the file in another folder - Open the file in a different viewer - Open the file as a PDF - Save as the current template - Make the active line 45cee15e9a
