**CollabREate Crack X64**

[Download](#)

-----  
----- collabREate is used to create a collaborative reverse engineering project collabREate Overview:

----- collabREate can run on multiple independent machines/computers, on a single machine (as long as those machines can talk to each other via a network). A single machine can have 1 collabREate server running on it, or multiple collabREate servers can be used and each server can handle one or more instances of the IDA Pro client plugin.  
How to Use it:

---

----- 1) You can run collabREate on your own computer (i.e. in the network with your other computers) and then you can use the collabREate Server GUI to design your collaborative reverse engineering session. On the collabREate Server GUI, you can include multiple client plugins that have the same IDA Pro project file opened in them. You can also include custom python scripts in the list of plugins. The collabREate Server will take care of the workflow/recording process for you. That is, as long as you don't mess with the server's settings, or add/remove collabREate plugins, the workflow and

---

recording part of the collabREate process is taken care of by collabREate. After you are finished with the collabREate workflow, you can replay the session and your IDA Pro clients will automatically connect to the server and re-open the same project file. 2) If you run multiple collabREate Server machines on your local network (i.e. your computer), but you have the client software installed on each of those collabREate Server machines, you can still setup collabREate sessions between the different collabREate Server machines. 3) If you have the collabREate client installed on your laptop, you can create a collabREate

---

session between your laptop and one of the collabREate Server machines that are running on your local network. This means, you can have your laptop open up the same project file simultaneously with two different computers on your network. 4) If you don't have the client software installed on your laptop, or you don't have a collabREate server running on your network, you cannot use the collabREate server. You can still do the following, though. - If you have a computer that is running on the internet that has access

---

collabREate is designed to offer a powerful collaborative reverse engineering framework to provide the ability to run multiple IDA instances on a single network file (or local machine).

collabREate Build Notes: Version 1.0.3 released on 2014-05-18 Fixed issue with saving files with 0 byte on non-English systems (issue #77) Version 1.0.2 released on 2014-05-16

Collaborative reverse engineering is now using a generic DB storage backend Collaborative reverse engineering now supports password protected files Collaborative reverse engineering now has a fully functional CLI tool Version 1.0.1 released on

---

2014-05-11 Fixed issue of collabREate logging into postgresql Version 1.0.0 released on 2014-05-04 The original purpose of this software was to offer a lightweight remote reverse engineering tool for IDA users. collabREate is now a collaborative reverse engineering tool that offers many features of its own.

collabREate Feature List: A distributed collaborative reverse engineering framework. Run multiple instances of IDA on a single network file or local machine. Reverse engineering operations are managed using pre-designed actions. Enables remote access via a fully functional GUI client and CLI tool. Collaborative file access via

---

Windows sharing (LAN only).  
Collaborative symbolication using  
postgresql, mysql or proprietary DB  
storage. Collaborative reverse  
engineering related commands.  
Collaborative reverse engineering bug  
report system (ticket system).  
Collaborative reverse engineering multi  
file management (see main README  
for more information). Collaborative  
reverse engineering file management  
(currently supports hexedit and  
BinaryPlus files). Collaborative reverse  
engineering can be used for malware  
analysis and malware research. Co-op  
reverse engineering games (see main  
README for more information). Free

---

30 day trial. Prerequisites: collabREate is designed to work on any platform that is supported by IDA. collabREate will only work on Windows systems.

Issue Tracker: To create an issue using the collaboration issue tracker system please refer to the README and Documentation section. Example

Plugin: Take a look at the plugin to see 09e8f5149f

collabREate is a plugin for reversing multiple IDA files at once. key features: \* Full integration with IDA PRO (stand-alone from now on!) \* collaborative reverse engineering \* two-way synchronization (reversed data are pushed back) \* database saving on the server \* zero-deployment \* multiple files support collaborative reverse engineering allows the user to reverse several binary files at once. It means that all the users are synchronized on the same reversing process and data can be shared between them. collabREate Architecture: collabREate Architecture:

---

collabREate Architecture: The plugin is multi-platform. It supports Windows, Linux, and MacOS X. Regarding the available plugins, collabREate is released under the GNU General Public License v3. Download:End-of-life wishes and care in the home: residents' preferences and adherence. This study compares preferences for place of death and terminal care in various settings of home care, with measures of adherence to preferences. Cross-sectional study of a sample of residents from the Los Angeles home-care agency. The agency in Southern California provides care for more than 3,500 elderly, disabled, and chronically

---

ill people per year, according to separate random samples of home residents (eligible patients) who were identified each month. Of the 1,215 home residents surveyed, 1,161 (96%) completed a 15-item preference questionnaire; 45% chose home, 24% chose hospital, and 21% chose long-term care. Twenty percent were allowed to die at home. Eighty-two percent of residents who were allowed to die at home did so. Seventy-seven percent of people who wanted to die at home did so, and 14% of those who did not want to die there left and went to the hospital. Fifty-three percent of residents who wanted to die at home

---

were accepted in the decision-to-die home, while 49% were refused. Eighty-seven percent of the residents who were allowed to die at home died within a week. Ninety-four percent of residents who knew they were dying would want to die at home, and 63% of those who did not know were ready to die at home. Seventy-five percent of the residents who preferred home care found home care difficult or impossible to get. Twenty-two percent of those who preferred home care but did not want to die

What's New In?

---

----- ... you are interested in a alternative way of collaborating on reversing tasks. collabREate can be used to: - Share information across multiple users working on the same binary file - Open an in-depth technical discussion about reversing tasks - Offer a collaborative work environment

Installation and usage: ----- collabREate was made to work with the easiest reverse engineering platforms available. Linux:

```
`` sudo apt-get install postgresql-client  
dpkg -i postgresql-  
client_9.6.1-1ubuntu2_amd64.deb sudo  
su psql postgres -c "create user idana"  
psql postgres -c "create database test"
```

---

```
psql postgres -c "psql -U idana -d test -c
"drop table if exists products" "" psql
postgres -c "create table products (id
int,type varchar(255),code
varchar(255),name varchar(255));" psql
postgres -c "select * from products;"
psql postgres -c "alter table products
add constraint
products_type_code_default
unique(code);" psql postgres -c "select *
from products;" sudo su su - postgres
psql -U idana postgres psql -c "drop
table if exists products" test psql -U
idana test -d test -c "create table
products (id int, type varchar(255),
code varchar(255), name
varchar(255));" psql -U idana test -d
```

---

```
test -c "select * from products;" psql -U
idana test -d test -c "alter table products
add constraint
products_type_code_default
unique(code);" psql -U idana test -d test
-c "select * from products;" ``
Windows: `` run as admin get latest
postresql extract zip run installer run as
admin psql -c "CREATE DATABASE
test;" psql -c "CREATE TABLE
products (id int
```

---

**System Requirements:**

**Minimum Specifications: CPU: Intel Core i3 (2.6 GHz) or better RAM: 4 GB of RAM Graphics: Intel HD Graphics 4000 OS: Windows XP Service Pack 3 or higher**

**Recommended Specifications: CPU: Intel Core i5 (2.6 GHz) or better RAM: 8 GB of RAM Graphics: Intel HD Graphics 5000 (Intel only.) Tutorial Videos: Achieve**
