Perl Builder includes a fully featured IDE that is based on the Visual Basic/Delphi concept of designers creating components and the use of "extensible editor boxes" that can be added or removed to achieve a desired look and feel. It contains features similar to those available in Visual Basic and Delphi. You can write, test, and debug Perl scripts within the IDE, as well as create Dynamic HTML files with outstanding features such as built-in animation. Output such as HTML, files, and emails can be previewed within the IDE. The IDE allows you to work in a fully graphical environment on the Windows desktop, and enables you to run, debug, and test your scripts without having to install a Web server or compile in a Web server environment. Perl Builder is fully integrated into the CPAN (Comprehensive Perl Archive Network) distribution. Perl components and extensions are available for use in the IDE from CPAN and the CPAN-based collection of Open Source Perl software. Perl Builder lets you work with Perl components from around the world. The CPAN (Comprehensive Perl Archive Network) collection of Perl software is available for use in the IDE from CPAN. A Component Wizard can help you install and configure Perl components in your application. Perl components can also be viewed online. Perl Builder Release Notes: Perl Builder is a complete IDE for Perl. It allows Perl programmers to create modules, CGI scripts, and other applications visually without the need to write any code. You can also create Dynamic HTML files that display dynamic Perl content. It supports the Perl 5.8 and 5.6 versions of Perl. CPAN (Comprehensive Perl Archive Network) components are available for use within the IDE. Many open source Perl modules are available from CPAN. Perl components can be installed from CPAN by using the Component Wizard. Perl Builder includes all of the features that you would expect in a professional IDE including data structures (such as DBIx::Class), a full-featured debugger with a mouseover variable inspection, color syntax highlighting, automatic indentation, a full-featured debugger with single step, and a full-featured debugger with watches. Perl Builder also includes a visual Perl object and component designer. The Perl Builder toolbox includes tools that let you create components such as objects, classes, subroutines, functions, modules, and CGI scripts. You can also use the toolbox to create very simple dynamic HTML files. Perl Builder User Interface

What's New In?

Perl Builder is a full IDE (integrated development environment) for Perl. Key features include a visual editor/debugger that is similar to products such as Visual Basic and Delphi. The CGI Wizard component lets both novices and experienced programmers create powerful scripts visually, without writing code. CGI simulation lets you run, debug, and test scripts on the desktop--without the need for a Web server. Output such as Dynamic HTML and automated e-mail messages can be examined visually in the IDE. The Perl Builder IDE includes all the features you expect in a professional development tool, including color syntax highlighting, automatic indentation, a full-featured debugger with mouseover variable inspection, single step, watches, and data structure dump. Capabilities: Visual editor: The Perl Editor (built on top of Perl) lets you write and edit Perl code. The editor includes basic syntax highlighting, an outline window, special line comment, line continuation, and support for the ANSI color formats (256 colors).

The Perl Editor supports the Perl 5 and 5.8 features and syntax, with the ability to enable or disable deprecated features (since Perl 5.8.0). Syntax highlighting: Syntax highlighting of more than 70 common Perl keywords is provided for the Perl Editor. Script navigation and editing: The Perl Editor can be navigated with a graphical object-oriented editor to assist editing, navigating, and navigating a script. A jump to definition function lets you navigate to an existing function definition, source location, or line, in a script, at a given line number. Overview We know that in the process of developing a web application, you may need some tool to deal with the complexity of the code, especially if you are familiar with the non-Perl language. Perl Builder is a Perl IDE developed by RealAlta Inc., which provides the powerful features and excellent support to you in order to help you perform many tasks in a fast and easy manner. To help you use Perl Builder more efficiently, below we will introduce some basic features of Perl Builder. 1. Perl IDE Overview Perl Builder is an IDE (integrated development environment) for Perl. Perl Builder provides not only a powerful Perl IDE, but also a set of tools that are designed specifically for Web applications. In this way, it is like a complement to the Perl CGI module and Perl CGI::Application. Perl Builder has been designed specifically for Web applications, and is a much better choice than Perl CGI, as it provides a lot of useful tools for Perl. For example, a user can easily find out which of his Perl libraries is loaded into the workspace or even what this workspace was last used for. Moreover, Perl Builder includes many helpful features for the programmer, such as the ability to manage more than one workspace, a color scheme, a built-in compiler, the
