SMemo Crack+ Download [2022-Latest]

SMemo is an extremely rich application that bundles a wide array of widgets aiming to provide the essential desktop utilities that the day-to-day user needs.

It comes with a high level of customization and bundles an extensive collection of clocks, launchers,

---

reminders and timers that can be easily handled. Instead of installing a bunch of applications that provide all these facilities, you can use SMemo and get access to all of them from a single platform. At first launch, SMemo opens a few widgets by default, namely: a clock, a sticky note utility, a calendar and a minimalistic control panel. From here, you can launch various applications or web pages, as well as to schedule various events, shut down or lock the computer and capture a

---

selection of the screen to be attached to a new memo. If you feel like the widgets overcrowd the desktop, you can close the ones that bother you and leave only the ones you need. However, they can be re-launched at any time using the control panel available in the system tray. This is a very rich section that allows you to manage the created memos in many ways; you can set various view modes, as well as to arrange them in different manners and assign them to groups. All the data

---

(including memos, schedules, anniversaries, program settings) can be backed up to an EXE file, which can be later restored if you want to undo the changes you've made since. The collection of widgets include many other utilities: a CPU monitor, disk space and memory info, a program and web launcher and countdown timers, to name just a few. You can enable or disable these as you like, either by using the system tray control panel or the Settings section. Overall, SMemo

---

makes a very good impression due to the large set of functions it brings to the table. It can be customized to suit your needs and is minimally invasive on system resources. SMMemo is a freeware and open source application that implements a wide collection of elements that help to organize and manage the desktop of a user. It offers an extensive set of features and presents them in a very transparent way, allowing the user to quickly access them with little effort. SMMemo is able to bundle several very different widgets together that are essential to the desktops of users. For

---

example, it includes a simple clock as well as launchers for specific applications or Web sites. It comes with a very compact control panel that allows you to change its menu items, add new ones or remove those you don't want to have. SMMemo is extremely customizable; you can change the amount of elements to be included, create new widgets and use any number of them. The program is completely open to contribution and is completely free to use. The main control panel for

---

the desktop widgets and apps is displayed in the top panel. There is a small status indicator in the top right of the screen that shows the current widgets present on the desktop. If you need to create a new widget, simply drag a widget to the desktop from any of the other tabs. Once a widget is dragged to the desktop, you will be asked to either select one from the list or to add a new one. You will have to pick a name for your widget from a drop down menu. Once the widget is

---

created, it will be added to the appropriate tab of the main menu, so you can later access it without scrolling through a list. SMMemo shows you the widgets in three different tabs: Timers: count down timers Displays: Displays and other widgets Apps: The application launcher By selecting one of the tabs, you will be able to customize it the way you want. In the Timers tab, you can choose the amount of widgets to display on the desktop. The display will depend on the number you have

---

selected. You can access the settings for each timer individually and configure it as you like. The maximum number of timers you can add is 6. However, the main window will only show 4 to 5 of them at a time, so you won't miss any of them. The only drawback is that the timers can only be configured for elapsed time. If you need to set up a duration and action, you will have to open the Settings window from the main control panel. The actions to be performed depend
