History AutoCAD Crack For Windows was originally developed by the architectural design firm of IAC Corporation for the Apple II series of microcomputers. It was the first commercially available CAD program. The program's early user base was primarily architects. IAC introduced AutoCAD in 1983 as a desktop application (then called Autodesk® AutoCAD for the Apple II). It was the first CAD software available for desktop PCs. AutoCAD has become the gold standard for CAD applications. AutoCAD is the third-most downloaded software on the Apple App Store and has been downloaded more than 225 million times as of June 2016. Early history Autodesk developed AutoCAD for the Apple II using code and documentation from the existing Construction Document System (CDS), originally developed in the mid 1970s. Originally known as "LineLink," the CDS was developed by Hildenbrand Engineering to solve the problem of drawing BIM (Building Information Modeling) models (then known as databases) using a line-based CAD application. The CDS was aimed at architects who used on-screen drafting tools to create models of buildings. They would edit the models with an on-screen CAD program and print them on paper using a standard computer printer. As the models became more complex, it became difficult to view and edit them. In 1977, Autodesk partnered with Hildenbrand Engineering to develop a software package, called Building Construction Document System (BCDS), to fill this need. BCDS was introduced in the mid-1970s. For the next few years, BCDS was the only architectural CAD system on the market. CAD applications were not yet popular among engineers and architects. They were costly, complex, and difficult to learn. With the release of the Apple IIe, Autodesk was able to bring its own CAD software to the desktop. Autodesk collaborated with Hildenbrand Engineering to expand their CDS product to work on the Apple IIe, and renamed it AutoCAD. AutoCAD for the Apple II On December 1, 1982, Autodesk released AutoCAD for the Apple II, the first commercially available CAD software for the Apple II platform. AutoCAD for the Apple II was released with a limited set of tools and functions. It had a predefined, fixed drawing view and only allowed users to place dimension lines and rotate objects in fixed positions. The program was sold for a nominal

Q: Recursive function that asks the user if it can proceed I am trying to write a function that asks the user if it can go to a certain point in the program. The function keeps asking for the user to say yes or no (y or n) if it is in the positive, the program continues. This is how I have written it so far. I don't know if it is the best way to do this. def recur(move): if move == (-1): print("I can't go that way") else: print("Can I go there?") if move > 0: print("Yes") recur(move + 1) else: print("No") recur(move - 1) if move == 0: print("I am done.") recur(0) A: I would suggest using while loops rather than recursion. I used Python 3 so I included the chr() function. def can_go(move): answer = input("Can I go there? y/n") if answer == 'y': print("Yes") return True elif answer == 'n': print("No") return False while True: if can_go(move): print('Yes') break print('No') print("I am done.")
