It has been developed in a number of different versions since its introduction in 1982. The latest version was released on December 18, 2017. One of the first commercial CAD programs to ever be produced, the object was introduced in 1979 in a piece of software called Technical Writer. After being in development for more than seven years, Technical Writer was cancelled due to lack of demand. In 1982, Autodesk was able to raise the funds necessary to develop a desktop CAD application in house with the help of an outside development company called SimulForm. SimulForm was responsible for developing the first Autocad software. According to Autodesk's website, the Autocad program was the company's first ever CAD program, and was designed to help engineers and architects quickly create technical drawings and schematics. The program was released as Autocad on December 4, 1982. In 1985, Autocad was updated and renamed to Autodesk AutoCAD. The program was the first to be released for the Apple II personal computer. That same year, Autodesk AutoCAD 2 was introduced to the market, and was the first major release of the series. Up until the launch of AutoCAD 2008, all of the versions of AutoCAD had a dark blue theme. Starting with AutoCAD 2008, the program was redesigned with a sleek black theme. With the launch of AutoCAD 2015, the latest version of the program, Autodesk included AutoCAD in the Adobe family of applications. Alongside, Autodesk made all of the current versions of AutoCAD available for free. The original program was designed to be run on mainframe computers (i.e., computers that handle multiple users at once). It also needed a high level of technical expertise to operate. To make it easier for non-engineers to use AutoCAD,

In order to do this, the batch files are typically written in either the AutoLISP or Visual LISP programming languages. AutoCAD does not natively support batch files. Instead, the native command line interface can be used, which allows batch file tasks to be performed using "operations" on the command line. User-created macros Users can create their own macros, in two programming languages, AutoLISP and Visual LISP. This allows the creation of custom tools, such as customized naming conventions for objects, or filters for specific object types in the drawing. Views AutoCAD's View system allows the user to create and navigate through a series of windows. The most basic type of window is the section window, which displays a selected drawing. These windows can be placed side by side, as shown in the above image. To create a new view, one or more section windows can be placed side by side and the entire space between them can be used as a viewport. More advanced views allow more options to be specified, such as a custom drawing area, and the ability to have sub-views open at the same time. To navigate through views, the user simply clicks on the title bar. Tools AutoCAD has a wide variety of tools, which are available either as AutoLISP commands, or.NET assemblies,.NET classes, and.NET plugins. These include: General purpose tools: Toggle Trace On/Off Trace Preview Add/Remove Trace Preview AutoLISP commands: Add/Remove Reference Add/Remove Geometry From Current Selection Inserted Geometry Insert/Delete Object Delete Geometry Add/Delete Center Point Add/Delete Top/Bottom Point Add/Delete Left/Right Point Add/Delete All Points Delete Geometry Apply 5b5f913d15
