Combine your files and folders into a ZIP archive for backup or storage without the pain of manually copying every file and folder. But don't just add any ZIP file to your computer, the tool will check it and see if it's a good ZIP file, that is, if it's the latest version of ZIP file in the world. Not all ZIP files are created equal. It's time to know which ZIP files are of good quality and which ones are of not so good quality. For a ZIP archive to be considered good quality, it needs to have this magic number: "PK" which stands for Portable ZIP Archive. All Zipped files which don't have this "PK" number in the file name are not considered to be good quality and are discarded. Moreover, since ZIP files are compressed files, to allow you to recover them, the tool also checks the size of the file. If the ZIP archive is compressed but is bigger than the original file, you will have the chance to recover it in a zip file, and that's great, but if the file is bigger than the compressed ZIP file, the recovered ZIP file will not be of good quality and will not be considered as a good recovery. Don't risk your files and folders, download this FREE tool today and recover your files!
