Art Director G4i Friday, May 25th at 10AM PT / 1pm ET / 6pm GMT. Q: Correspondence between projections and line spectrum Let X be a finite dimensional inner product space. Then a projection P is a bounded linear operator on X so that $P^2 = P$. In the case of an inner product space, this means that P is self-adjoint, which means that $P = P^*$. What then is the correspondence between projections and the spectrum of P ? Namely, what would the possible values of λ be that correspond to eigenvectors of P ? A: For each $\lambda \in \mathbb{C}$ the equation $Px = \lambda x$ has a nonzero solution x , so $0 \in \sigma(P)$, and $0 \in \sigma(P)$ iff P is not invertible. You can verify all the other properties by noting that $P - \lambda I$ is a nonzero projection on X and hence invertible.
