**Purpose of AutoCAD** The purpose of AutoCAD is to assist designers, draftsmen, and anyone else who works with drawings in creating technical and architectural drawings. These drawings can be in many different forms, such as simple diagrams, schematics, architectural plans, and 3-D models, but all can be described as drawings of some sort. By nature, these drawings involve geometric shapes, lines, and curves. In this section, you'll learn about the various types of drawings you can create with AutoCAD.

**Types of drawings created with AutoCAD** There are three main types of drawings created with AutoCAD: drafting-related drawings, engineering drawings, and presentation or documentation drawings. Drafting-related drawings

Drafting-related drawings are created to assist you in making technical and architectural drawings. Examples of drafting-related drawings include:

- Layout drawings of piping systems
- Engineering drawings of mechanical and electrical components
- Architectural drawings of buildings, rooms, and other structures

To make a drafting-related drawing, you need to start with a plan, elevation, or section

drawing. Engineering drawings Engineering drawings are used to describe technical and structural concepts for buildings, components, and machines. They include drawings of machinery (mechanical) and electrical systems, piping systems, and other mechanical and electrical equipment.

Presentation drawings A presentation drawing is used to describe and show a model or artwork. Presentation drawings include computer-aided design (CAD) drawings of mechanical and electrical components, architectural designs, building plans, and documentation of different types of architectural models. AutoCAD's various drawing types This section describes the various drawing types that can be created with AutoCAD. Drafting-related drawings A drafting-related drawing is a drawing that describes the geometric shape of an object, such as a pipe, electrical circuit, pipe fitting, or other mechanical or electrical part. These drawings include: Layout drawings Engineering drawings Presentation drawings Drafting-related drawings are created in a digital modeling environment. You may create drafting-related drawings using the tools in the Freehand drawing tool, the Type tool, or other drawing tools. Example of a drafting-related drawing Figure 1 shows a

Development (API) software Customizing AutoCAD is available in two methods: AutoLISP and VBA. AutoLISP allows AutoCAD users to create macros for automating the processing of drawings. These macros could then be saved as an AutoCAD template (object class), or can be saved as an AutoCAD template file (object file). The AutoLISP code is called from VBA scripts, so VBA scripts can automate AutoCAD processing. The scripts can be either placed into the Drawing Objects group of the menu or run from the command line. Since AutoLISP is a form of AutoLISP, it requires that the user knows AutoLISP programming, but the process is straightforward. VBScript is a Microsoft scripting language used for automating AutoCAD, developed with VB6 and VB.NET. A VBScript sample script might look like the following: While both VBA and VBScript require the user to have a prior understanding of programming, VBScript is considered more accessible, and is thus more commonly used to

automate AutoCAD. Files All CAD systems use the same basic file formats to store drawings. In 1985, Hewlett-Packard introduced AutoCAD, which was based on the previous IES, the Ingres Drawtext, and the simplified vector graphics system called EPS. EPS is now the de facto standard for all vector graphics. DXF is the standard for AutoCAD and is one of the two most common vector graphics interchange formats (the other is SVG). AutoCAD uses the following basic drawing file types: DXF DWF DWG DGN DPI DXD Source files for other programs can be imported into a drawing and used as reference data or as the object for a job. For example, a camera file might be exported from a 3D modeling program, and used as the object for a drawing. A video file might be imported as the object in a drawing. Any file type can be used for reference. Drawings can be imported from a file that represents the data of the file. For example, a picture file might be imported as a reference, and may later be exported as an object for a drawing. Software architecture AutoCAD is mainly a drawing program. Although it is possible to edit vector graphics, most users of AutoCAD work with only the drawing area. When 5b5f913d15

Get the company license and save the license key on the desktop. Run the CADKeyGen.exe program. Now click on the Generate button and wait until it finishes. Open the Autocad and take the license key saved on the desktop. Run the Autocad and activate it. Place your company login and password on the credentials screen. Select the commercial option from the Login screen. Choose a password for the user. Save the credentials. Close the application and exit the Autocad. Restart your machine and then open the Autocad. Modifying the License Key: If you need to modify the license key you must first close the Autocad. -Close the Autocad and restart the machine. -Open the Autocad. -Click on the Program tab. -Click on the "Options" button. -Click on "Modify" button. -In the "License Key" field, use the License key you want to use.
