**\*\*\*Transferring files to and from other programs:\*\*** You can upload files to Adobe® Photoshop® CS6 from other programs, such as Microsoft® Photo Story® 6 and Fireworks® CS5. If you already have a file on your system, you can also download files to your hard drive from other programs, such as Adobe® After Effects®, Fireworks®, and Illustrator® CS6. To transfer files, you insert them into the appropriate drop-down window on the File menu and then click **\*\*Open\*\***. **\*\*\*Opening files:\*\*** You can use Photoshop to open images, PDF files, and bitmap images from other programs. In Figure 5-6 (page 230), you see the Options window for opening a PDF file. Just click to choose the file, and then click **\*\*Open\*\*** to open it. FIGURE 5-6: Choosing the program that opens an image file and the file type. # GETTING CREATIVE WITH PHOTOSHOP Photoshop can handle more than just photos. It can handle artwork, graphics, and even web design. This program has great vector editing features and a robust drawing tool for you to draw paths that look just like the vector images you produce in Illustrator® or another vector program. # SECURING PERMISSIONS TO VIEW FILES Even though Photoshop is a powerful program, as I note earlier, you can't open files if you don't have permission to do so. I'm not entirely sure when the system was set up, but it has worked this way since Photoshop CS5. Users used to have to use the File⇒Open Image command first, and then confirm the permissions when prompted, but that's no longer necessary. The Open command does open the file with read-only permission and is an easier process. To access read-only permission when opening a file, follow these steps: 1. **\*\*Open** the image that you want to open as read-only and then click the File tab.**\*\* 2. \*\***In the Files of Type box, click Browse.**\*\* 3. \*\***In the Open dialog box, click the drop-down arrow next to Image Type and then choose JPEG or Photoshop Document (see Figure**\*\* +5-7\*\* \*\***).**\*\*** The other options I explain in this figure are optional. You can use them if you prefer. 4. **\*\*If** you want to see only

Since the beginning of the 21st century, Photoshop has used layers to build complex images. Each layer is a transparent copy of the previous layer. This tutorial will go through each layer and give an overview of the characteristics of each. Each layer has different responsibilities, which will influence the way you manage each layer. 1. The Background Layer The background layer contains all the color values and the opacity. It is the first layer in the picture. Colors and opacity are "painted" on this layer. The opacity allows you to modify the transparency of the background layer. You cannot display the background layer directly, but you can see it through the transparency of other layers. It is also used to define the borders of the image. At the very top of the Layers palette is the "Layers" toolbar. When you create a new document, you will find the layer type on the left "layer style". You can modify the properties of the background layer, such as size, color and opacity. You also have the possibility to add a mask to the layer. See the image below. 2. Layer Styles and Masking The layer styles which are available in Photoshop Elements have the same characteristics as in Photoshop, but a different interface. A layer style modifies the appearance of one or more colors. You can either apply a single layer style to the entire image (displayed directly in the Layers palette) or activate several layer styles by clicking on the "Layer" button and choosing between them. It also allows you to modify all the information, such as: visibility, transparency or the color of one or more colors. It is useful for removing color or creating graphic effects. For more information, see the image below. Layers styles are applied to the "foreground" layer, meaning the layer that is visible on the image. It is also possible to mask the "foreground" layer, meaning that you can only see through the effect of the layer style and not the layer itself. See the image below. 3. The Foreground Layer The foreground layer is always visible in the document. It is the layer where you paint. It is responsible for everything that is visible on the image. It has to be on the foreground layer because you have to paint on it directly with the layer mask. If you want to make a complex image, you will have to make the layers very dense. You always have to paint or draw on the

Walton County Agricultural Association Founded in 1969 to help the region's farmer cooperatives and associations Walton County Agricultural Association On October 24, 1969, the Walton County Agricultural Association (WCAA) held its first meeting. At that time, five associations (cooperatives) joined together to form one association, known as the Walton County Agricultural Association (WCAA). Thanks to their cooperation, the membership of the WCAA grew from 15 farms in 1969, to more than 150 today. The WCAA's first meeting was held in the County Commissioners' Board Room at the Walton County Courthouse. Among the founding members were Floyd Ashley, Tim Harris, Richard Powell, Dave Smith and Darrell Crigler. They were joined by Fred Weatherford in 1970; and by Darrell Green, in 1971. A group of farmers were encouraged to attend an Association of Public Health Nurses (APHN) training session in Plant City. The following year, APHN paid for a class at the Davie County Agricultural Association's School in Ocala. In the spring of 1972, the WCAA participated in the first "Agvac/Savannah Area Corn Exchange" in Savannah, GA. Twenty-one members of the WCAA attended that "corn exchange," which was the first of several similar events sponsored by the then-newly-formed Federation of Georgia Agricultural Cooperatives and Associations (now known as the Georgia Fruit & Vegetable Growers Association). The following year, the Association hosted the "Cotton Meeting" in Moultrie. In 1974, the group became the first to hold a corn processing demonstration in the area. The event was held in Wesley Chapel and attracted a large crowd. The following year, 25 people attended the first WCAA "Cooposeum in Wesley Chapel." The number of affiliates of the Association increased and by 1975 members were attending the Association's meetings in Tara, Riverdale, Altha, Brantley, McRae, and the County Courthouse in Walton County. In 1976, the first "Corn Day" was held on the Lee Highway in the center of Wesley Chapel. It was the start of a tradition which continues to this day. By 1977, the number of affiliates had grown to more than 50 and as many as 130 people attended meetings held at the Wesley Chapel and Dixie Campgrounds.
