AutoCAD's popularity has grown since it was released, reaching roughly 45 million users worldwide, as of 2013. The number of users of AutoCAD has been expected to grow. This is due, in part, to the increasing popularity of mobile devices. The number of annual licenses sold also increased from 2000 to 2012. AutoCAD is the world's most widely used 2D CAD application. AutoCAD does not include tools for 3D computer-aided design (CAD) or computer-aided manufacturing (CAM) and, as such, it is not intended to be used for those purposes. AutoCAD is generally used to create two-dimensional (2D) architectural, engineering, and construction (AEC) drawings for mechanical, electrical, and plumbing (MEP) drawings. It is also used by insurance adjusters, architects, engineers, and other professional and technical users to create high-quality drawings and animations. In addition, AutoCAD is used in some areas of data visualization, information management, and analysis. AutoCAD has been used to create a set of standardized drawing standards to standardize the text and graphics included in drawings. AutoCAD 2018 was released in November 2017, and includes new functionality for certain architectural and construction drawing tasks. For example, the window-based modeler was introduced in AutoCAD 2018, which replaced the ribbon interface. The ribbon interface was introduced in AutoCAD 2014, but was re-coded to use a window-based modeler. These changes allow users to place drawings at different scales, and keep them organized by related drawings. History AutoCAD's basic concepts originated from an earlier program by Autodesk, originally called the Graphical Design System (GDS). AutoCAD was originally released on Dec. 21, 1982, for the Apple II and PC (with 16KB of RAM) and allowed for the creation and editing of architectural, electrical, and plumbing (AEP) drawings. It was developed by the Graphical Design System Division of Autodesk Inc. (formerly Autodesk) and was originally marketed as a three-in-one system that allowed for the creation, editing, and viewing of AEP drawings. The company's goal in developing GDS was to create software that could be used at multiple sites and it allowed users to access their files through a host program. When the software was released, it was first known as the Draw/Edit Project
