desktop with an animated Christmas tree. It can be configured by less experienced users and professionals alike. What's the best tool to perform the comparison and a feature check on Windows components? Simple answer: PerformanceTest. It's a small Windows utility that you can run from a Windows command line that has several cool features, all of which are useful if you are someone who needs to perform a comparison and check of the performance of your hardware and/or software components. As an added bonus, the utility reports the change since the last test. (It has not been my experience, however, that some components are not reporting this, even though they should be.) PerformanceTest runs under Windows XP SP2 and above. It will
