Q: Is there a way to make Xml Descendant select certain element in the hierarchy? I've tried the following:
`XmlDocument xml = new XmlDocument(); string dirString = @"C:\Users\admin\Desktop\XmlString";

Q: How can I extract a particular URL in the document of a particular page using regex? How can I extract a
particular URL from the document that is in a particular page of the document? My URL is Google I'm using
Javascript. I've tried this but it isn't working: `var pattern = new RegExp("+"Google+""); return
pattern.test(document.body.innerHTML);` A: You want to use the `site.href` property, not the `href`. You also
want to add quotes to the string literals, to be safe. Use: `var pattern = new RegExp(" + \"Google\" + \");` BY
