When an application is installed, it usually installs an entry in the system registry which prevents Windows from asking you for the permission to run that application. However, if you install programs over the same computer, you'll probably hit an error message stating that you're installing an application over an existing file. To evade this, the User Account Control (UAC) program was introduced. Essentially, UAC provides a better security and stops the installation of certain programs without forcing the user to get their permission. However, there are situations when you'd rather don't get the prompt for permission and you'd rather just deactivate UAC and install the program. UAC Pass will now do that for you with no hassle. The UAC Pass setup file is a user-friendly and intuitive software, which works by deactivating UAC for an application. The setup file needs a user to install a helper program which is a small application that will deactivate UAC for selected applications automatically, when prompted. You can drag and drop the helper application to the desktop, and this automatically trigger the UAC deactivation process for the selected application. If you like being spammed with UAC prompts, this UAC Pass can be used to avoid those annoying messages for programs you work with on a regular basis. You can also save UAC Pass to a USB flash disk or similar storage unit. And then, you'd be able to run the software on any machine easily. Features of UAC Pass: UAC Pass supports both 32-bit and 64-bit versions of Windows. You can easily install UAC Pass to all your user accounts by running a single executable file.
