Q: How can I view the definition of a keyword/property in F#? I sometimes forget to prefix the properties that I use in F# with the access specifier (ie: x in C#), so I was wondering if there is a way to view the definition of a property in the Object Browser in Visual Studio. A: You can find information about a declared identifier using Alt-Q in Visual Studio, F12 in Visual Studio Code, or F12 in the MonoDevelop editor. Image caption By day, the wall is an abstract representation of a flat plane The image is a perfect representation of the artist's idea - but in reality, what that wall has in store is much different. In every way, when viewed from one angle it is flat - but from another, it is pitched at a steep angle. If you walk across the south side, they end abruptly at a cliff, effectively forming a stairway at 45 degrees. And that means that, from high up in the sky, it looks as if someone has painted a flight of steps into a cliff-face. Unlike the image, with time the white paint on the wall will keep peeling away, leaving the dark brown sandstone below. This means that as the cliff recedes it will keep getting lower. It's an installation that is part of an ongoing exhibition at Peplow, the National Trust's gallery in Somerset. Sandstone cliff When we think of chalk and its cliffs we think of white cliffs on the south coast of England. But in the Cotswolds, a cluster of villages and towns that give a rough shape to the chalk formations that start to dominate the landscape as we head south from Birmingham, the cliffs are so far away as to be invisible to the naked eye. Paul Keates, whose gallery Peplow is hosting the exhibition, calls the new work looking into the abyss "a meditation on the topography of a flat plane". The gallery sits on a vast stretch of land at the entrance to Saunton Sands, a private country estate. The cliff here faces a succession of isolated rocky points or bosses - coastal landforms that are the remnants of a former raised beach. At the surface of that particular area of

The Rectangular Selection tool allows you to draw freehand, adjustable shapes in images. The Gradient tool allows you to make color transitions across a section of an image. The Type Tool allows you to type text on a layer or background. You can change font sizes, text color, and other settings. The Pen Tool lets you change the opacity of a stroke. Use a small, circular area to apply a semi-transparent color, then drag the tool to change the area of the stroke. You can apply multiple layers of different pen strokes to change the opacity of each one. The Dodge and Burn tools let you lighten or darken a selected area. Unlike other tools, this effect is applied to all layers of the image, and the tool features a grid that allows you to specify how much of the image will be affected. The Gradient tool is frequently used for coloring layers. To create a gradient, select the Gradient tool and then click on the color box. Change the gradient directions and colors and then drag to select the area you want colored. The selection will appear in a box at the current gradient position, so you can experiment with a more or less selected section of the image. The Blend tool allows you to fix or blend two areas of an image together. Change the settings and then click and drag the tool to apply a new color. You can drag the settings over the preview to create a gradient and then drag a new area to blend the gradient into an existing area. The Eraser tool allows you to erase color from an image.
