MySurgical treatment for brain metastasis of lung cancer: Analysis of three hundred and forty-nine cases in a single institution. Brain metastasis (BM) of lung cancer is one of the most common types of metastasis and can result in considerable morbidity and mortality. In this study, we reviewed the surgical treatments for BM of lung cancer in our institute from July 2006 to December 2014. Three hundred and forty-nine patients with BM of lung cancer underwent surgical treatment in our institute. The postoperative improvement rate, neurological symptoms improvement rate, and complications rate were analyzed. The patients were divided into different subgroups according to the treatment methods. The patients in Group A underwent brain tumor resection plus cavity excision. The patients in Group B underwent brain tumor resection plus cavity excision, while endoscopic aspiration therapy was used for patients in Group C. The mean time interval between lung cancer diagnosis and BM occurrence was 16 ± 19 months. The most common symptoms before surgery were headache, seizures, hemiplegia, visual impairment, and memory dysfunction. The mean follow-up duration was 32 ± 18 months. The 1-, 3-, and 5-year survival rates of all patients were 80.1%, 37.5%, and 33.1%, respectively. The mean survival time was 37 ± 22 months. No significant difference in the overall survival was observed between the groups. In the multivariate survival analysis, treatment method was the only independent predictor of survival ($p < 0.05$). In addition, the epidermal-derived cytokine Thymus and Activation-Regulated Chemokine (TARC)/CCL17 can also regulate the CCR4-mediated attraction of dendritic cells and Th2 lymphocytes into the dermal microenvironment $[[@B61]]$. Furthermore, there is evidence that a subset of DCs acquire an alternatively activated state that favors Th2 responses $[[@B62]]$. The role of TLRs in regulating the DC immune response is not well understood. Much of what is known is based on *in vitro* studies. However, there is increasing evidence that TLRs play a critical role in promoting Th1 responses. Thus, it has been demonstrated in a number
