I tried using: SimpleDateFormat format = new SimpleDateFormat("HH:mm"); format.setTimeZone(TimeZone.getDefault());

```
SimpleDateFormat hourFormat = new
SimpleDateFormat("hh:mm a"); SimpleDateFormat
minuteFormat = new SimpleDateFormat("mm:ss a");
System.out.println(format.format(currentTime));
System.out.println(hourFormat.format(currentTime));
System.out.println(minuteFormat.format(currentTime));
And it gave me: 18:53 PM 16:41 PM Edit: I found out the
problem. I forgot that the format has to be set before the
time is written out. Thank you all for your help. A: Your
formats are in the wrong order. Also you need to set the
time zone if you pass a Date to the format:
SimpleDateFormat format = new
SimpleDateFormat("HH:mm");
format.setTimeZone(TimeZone

You may be able to create another Instance of the Program should you experience any problems with your installed Copy or to add additional Functionality. Note: If you are using an earlier version of Windows, download the Bin file then extract the archives, and run the zip file. Pending Removal: The most obvious question that you will have to ask yourself is why on earth you need an application to remove the files and folders on your computer? Stories from the past, by way of my own experiences, tell me that I have been infected with 'virus' and that is what is 'removing' all my files. But on closer inspection... The following are some F-I-S-N-O-O-P in a nutshell list. I can not cover everything you can do with this application, so I have to be selective in what my time and efforts are directed to. Bottom line: It is a file manager, and as such allows you to browse the current filesystem and to copy, move, and delete files, in a myriad of ways.
