Field of the Invention The present invention relates to a technique which is effective when applied to a semiconductor integrated circuit or the like having a plurality of power supply voltages. 2. Description of the Related Art Technologies relating to a semiconductor integrated circuit which processes mixed signals using a plurality of power supply voltages and drives a display panel using a display signal of a video scheme such as the so-called RGB signal (e.g., RGB signal) and a video signal (e.g., a video signal), a power supply voltage for the semiconductor integrated circuit, or the like, has a wide range. As a result, there is a need to generate a source signal, a display signal, an internal power supply voltage and the like for driving by a plurality of power supply voltages in a semiconductor integrated circuit which processes such a wide range of power supply voltage. As a first example, an internal voltage generation circuit includes a first voltage generating circuit for generating a first voltage (a second power supply voltage) and a second voltage (a first power supply voltage) which are mixed to generate a third voltage (a third power supply voltage), and a second voltage generating circuit for generating a fourth voltage (a fourth power supply voltage) which is different from the first voltage and the second voltage (the first power supply voltage and the second power supply voltage). The internal voltage generation circuit generates a first power supply voltage, a second power supply voltage, a third power supply voltage, a fourth power supply voltage, a display signal, and an internal voltage for
