For Desktop PCs with Windows XP, Windows Vista and Windows 7 operating systems. This is a very difficult question. First, what's the threat model? This requires some discussion of the design goals. Design Goals We don't want to break users (i.e. make an attacker's job easier) We don't want to make things more complex (i.e. keep things simple for the user) We want to reduce the attack surface Our top priority is obviously security (which we achieve by requiring authentication). Our second priority is accessibility (i.e. we don't want to ask anything of the user that we don't absolutely need) and efficiency (we want to provide the user with functionality as quickly and efficiently as possible). Obviously, we can't have our security and our accessibility at the same time. We can also never have our security and our efficiency at the same time, for efficiency requires some level of access to the device (like for the login screen). Application Defined Threat Model In this case, the risk model is the threat model. Threats can be mitigated by applying defenses, security measures, or countermeasures. We provide real options for the user to choose from. Of course, the only real options available are a password and a password reset key. Note: This is not an unique case. There are other authentication schemes that share the same characteristics, so that the threat model is the same. For example, fingerprint scans. Physical Attacks Our physical attacks are reasonably well covered by the password itself. We've got temperature, pressure, electrical, and electromagnetic attacks, and we've got to provide some way to reset the device with a key. These attack attacks are reasonable (and a small enough threat that we can probably ignore them).

"We are calling upon the Americans to leave us and give us weapons to fight them," the cleric says. The video has been uploaded on a YouTube account linked to the White Helmets. While the White Helmets have been recognized by the West for their important work in rescuing Syrians from the brutal war ravaging the country, very little attention has been given to the fact that many of their members hail from other countries, such as Iraq. In October, Agence France-Presse (AFP) reported that "the White Helmets, a group credited with saving lives in the aftermath of Syrian dictator Bashar Assad's deadly crackdown on demonstrators, are increasingly being viewed by Damascus and its allies as an enemy. "In a country where the uprising against Assad began, they operate in rebel-held areas where he and his allies are most active. They have run training sessions for rebels, and are increasingly seen as a target. The Syrian authorities are demanding their withdrawal and saying they are illegal." The video is accompanied by a message calling upon "all Arabs to embrace the resolution of the Syrian crisis," and denouncing "the American occupiers" that are "sending weapons to ISIS, which is terrorizing Arab people." At the end of the video, Iraqis are seen burning a US flag. In a statement released on September 25, the White Helmets said it was "exhorting the world to put an end to the American occupation of Iraq and the crimes committed in its name." The release added, "The

Have a.The world's first 3D printer, created by MIT's Dr. William Dutton, has gone on sale for \$599,000 with a serial number of zero. The machine, which was first unveiled in 2014, can print a small brick, but its creators have said the goal is to produce small-scale objects that will eventually be sold to consumers. The Pi, the small printer normally priced at \$250, will be available on Amazon.com beginning on March 3. The device is the brainchild of arch-chicken entrepreneur Ben Krasnow, who sees the 3D printer as a way to boost the "cool factor" of building things. The bird has come to realize the true potential of 3D printing. Just think of this: If you can control the application of protein-based building blocks with the precision of a molecular gastronome, you can start designing anything you want, from an omelet to a T-shirt or, for the truly adventurous, a dragon or a spacecraft. The printout, you see in the image above, is 22 percent lighter, while its volume has increased by half, the company says. Sure, printing a house is a little weird—but if you're Ben, you just might be the next Jeff Bezos. As the Yale course notes, the course is "designed to be a comprehensive overview of 3D printing and its potential impact on the world." Regardless of how you feel about the concept—and maybe even despite how you feel about the concept—the course is fascinating.Q: Inherit HttpContextBase from HttpContext I have an API app that has to be compatible with both environment A (run on Windows, IIS) and B (run on Linux, Apache). Environment A uses windows.system.web.httprequest for the HttpContext and Environment B uses linux.system.net.http. I wrote a wrapper class that extends HttpContextBase from windows.system.web.httprequest
