A: The only difference between an XM board and XM series is the chip (the Sound Device, not the board itself) and some BIOS settings. You got the wrong chip, and some people suggest that the BIOS settings can have an influence on sound quality. Q: Inverse of the cascade operator in Electron I've been wondering if there is an inverse function to the cascade operator (assuming both are used

in a formula). I have seen the expression $e^{(ax+b)}$ in Mathematica and wonder if there is a similar function or at least some notation that makes it possible to express the exponential. A: You can define the function you need in the following way. First define a new function as a composition of your function $f(a,b)$: $f[x_,a_,b_] := \text{Cumulant}[f[a,b],x,x]$ then you should be able to use the Defined function $\text{Defined}[f[a,b],\{a,b\}>0]$ which should yield True. Probing the activation process of melittin upon interaction with biomembranes. Melittin is a pore-forming peptide that is active against Gram-positive and Gram-negative bacteria, and it has been shown to disrupt biological membranes. The interaction between melittin and plasma membranes results in the release of calcein from the membrane and in the permeabilization of cells. In the present work, we studied the kinetics of calcein leakage and whole-cell permeabilization induced by melittin at different temperatures. The release of calcein from cells pretreated with the peptide is not linear as the temperature is raised, while the whole-cell permeabilization is essentially a linear process as the temperature is increased. The rate of whole-cell permeabilization decreases with increasing temperature. At temperatures much higher than the protein melting point, the first-order rate constant of permeabilization was greater than $1 \text{ Gy}^{-1} \text{ M}^{-1}$, but it dropped to $0.4 \text{ Gy}^{-1} \text{ M}^{-1}$ for 2.4 mg/mL melittin at 50 degrees C. We propose a mechanism in which the first step of permeabilization is a partitioning of melittin into the plasma membrane, from which it is released at higher temperatures. The final step is the
