Nanorock friction tuning by nanochannels: toward higher sensitivity in surface acoustic wave devices. We demonstrate the capability of nanochannels to tune the surface roughness of metallic gratings and thus to improve their nanomechanical properties. In our experiments, we have fabricated and characterized the operation of surface acoustic wave (SAW) devices whose interdigital transducers are made of different metallic gratings. The gratings were sputtered on crystalline quartz substrate, and then etched by an acid solution. Nanochannel grooves were made by an FIB-preparation method using an SF(6) gas ion beam etching technique. Our experimental results show that the wave propagation characteristics of the SAW devices with metal gratings increased when nanochannels were etched. When the nanochannel depth was approximately 50 nm, the SAW resonance peak was sharpened. These phenomena could be explained by a simple theoretical model based on the effect of surface roughness on the SAW propagation characteristics. We also demonstrate that we can fabricate the SAW devices with a metallization deposited on SAW substrate by nanochannel grooves.

Laptop Drivers, Printer Drivers, Software and Downloads for Windows and Mac.1. Field of the Invention The present invention relates to an optical package containing a light emitting diode.

2. Description of the Related Art As the display size and image quality of a display device increase, the display size of an optical module used in the display device also increases. Accordingly, a method of

increasing the density of the optical module, in order to increase productivity, becomes more important. The optical module is formed of a package for containing an optical device, such as a light emitting diode, and a printed circuit board on which the package is mounted. For example, a display

device often uses a flexible printed circuit board as the printed circuit board. The flexible printed circuit board is bent along a predetermined bent shape, such as a bent shape of a curved surface or a tubular shape of a metal pipe, when the flexible printed circuit board is mounted on a surface, such as a wall surface or a back surface, of the display device. However, when the flexible printed circuit board is bent along the bent shape, the flexible printed circuit board may be damaged. Especially, if stress is applied to the flexible printed circuit board along the bent shape, the flexible printed circuit

board may be easily damaged. Furthermore, in order to improve the productivity, the optical package, i.e., a package for containing the light emitting diode, is preferably small in size. On the other hand, if the optical package is too small in size, a space for disposing the light emitting diode may be limited. As a result, the light emitting diode may have a limitation of light output. When a space for disposing the light emitting diode is limited, the size of the light emitting diode may be limited. Therefore, the light emitting diode may be difficult to be formed in a rectangular shape or a

trapezoidal shape, and may be restricted to be formed in a predetermined trapezoidal shape. Cameroon: March protests forced president out Eighteen people have been arrested in the aftermath of months of anti-government protests in Cameroon that led President Paul Biya to step down last month. Two anti-government protesters have been killed in clashes with riot police in the north of the country. AFP news agency quotes witnesses as 1cdb36666d

To keep the code in one place, I declare a static property, which is used to get the default route. I don't want to repeat the routing code all over the place in this class. I've found two ways to do this. The first way: private static readonly RouteData

```
DefaultRouteData = new RouteData(); public static RouteData GetRouteData() { if (string.IsNullOrEmpty(HttpContext.Current?.Request.Url.AbsolutePath)) { return DefaultRouteData; } return new RouteData(new RouteValueDictionary(Request.RouteData)); }
```

The second way: public static RouteData GetRouteData() { var routeData = new RouteData(); if (string.IsNullOrEmpty
