2. ***3 Choose Layer > New > Layer via copy**. As with any layer, you can copy layers by choosing Layer > New > Layer via copy. This puts the copy on the Photoshop workspace, named Layer 1. 3. **4 Choose Window > Arrange and drag the new layer below the current one so that it sits to the right of the image, as shown inFigure 1-4.** The new layer sits below the current image on the workspace. If you're new to Photoshop, learning how to arrange layers helps you immensely to navigate the program. If you click and hold a layer on the workspace, you can move the layer up and down within the layers list. You can easily and quickly reorder layers by dragging their names to the left. 4. **5 Add a new layer at the top of the stack by choosing Layer > New > Layer via copy.** Move this new layer below the bottom-most layer, as shown in Figure 1-4. The layers are now arranged as shown in Figure 1-5. The final editing steps for this image are seen in the next few steps. But note that you can add text, shapes, and other elements to your image in this section. 5. **6 Choose Image > Adjustments > Levels and drag the bottom-left slider to the right to bring down the image's black and white points.** The Levels dialog box appears, as shown in Figure 1-6. Drag the blue sliders until you achieve the desired tone and contrast. For more about the Levels dialog box, see Book II, Chapter 6. 6. **7 Close the Levels dialog box and add a layer mask to reduce the blacks on the new layer by clicking the eye in the top-left corner of the new layer mask icon, as shown inFigure 1-7.** You can add layer masks on top of any layers by clicking the eye icon in the top-left corner of the layer mask thumbnail. 7. **8 In the Layers palette, click the eye icon in the top-left corner of the Layer 1 thumbnail to close the layer mask.** The image appears with its effects largely but not entirely removed. 8. **9 On the menu bar, choose Edit > Adjustments > Desaturate.** Figure 1-8 shows the resulting desaturated and graded version of the

In this tutorial we will walk you through the process of converting an image into a high quality graphic using Photoshop elements and Adobe's Camera Raw. We will be using the following tools: Adobe Photoshop Elements (for the graphic conversion) Adobe's Camera Raw (for the conversion of the photo) Power Point Step 1: Open Your Image Open the image you would like to convert in Photoshop Elements. As mentioned earlier, the feature set for this tutorial will be limited to what the free version of Photoshop Elements offers. Step 2: Convert Your Image to Black and White Open the Image | Adjustments | Desaturate Step 3: Undo the Sepia Effect You can see above that the desaturated image looks very similar to a sepia effect, but the sepia settings are not set correctly. Open the Image | Adjustments | Desaturate Step 4: Change the Sepia Effect to Vivid Colours Double-click on the image | Adjustments | Desaturate and pick Vivid Colours. Step 5: Undo the Desaturated Effect You can see above that the desaturated image is now very close to what a sepia effect would look like. Open the Image | Adjustments | Desaturate | Adjustments | Vivid Colours and select Off. Step 6: Adjust the White Balance We will now add a slight warming or cooling effect to the image. On the top left of your screen you will see the colour wheel that is currently showing. This is where you can adjust the white balance of your photo. Click on the colour wheel and go to the Saturation tab. Then, click on the yellow-ish-greenish button. This will add a slight warming or cooling effect to the image. Add some more saturation if you like as well. Step 7: Adjust the Exposure Open the Image | Adjustments | Exposure | Details, and then click on the plus sign and adjust your exposure. You can see that the image is still a bit on the dark side, so we need to add some brightness. Open the Image | Adjustments | Brightness and Contrast, and then click on the plus sign and adjust your exposure. Step 8: Enhance the Image a Little Bit Open the Image | Adjustments | Blur 05a79cecff

The Color Picker makes it easy to change the color of an image, and even the eyedropper tool makes it easy to sample colors directly from an image. The Gradient tool makes it easy to create smooth gradients for special effects. The Pen tool allows you to draw lines of any color, width, and style. And the Rectangle Tool makes it easy to draw rectangles of any size, shape and color. Brushes The most basic brushes in Photoshop are the default and the Gradient, Pencil, and Brush shape brushes. These basic brushes let you apply effects quickly. As long as you're not doing very detailed work, the default brush should do fine. If you want a different effect, then the Gradient, Pencil, or Brush shape brushes will help you with that. You also have the opportunity to make brushes for special effects, like the Blob Brush, which makes it easy to paint blobs of any color and size. The Gradient tool makes it easy to create smooth gradients that can be used to create a variety of effects. A Gradient fills the pixels in the layer where you've applied the gradient with the colors of the gradient. The Gradient settings on the Gradient tool panel let you control how much of the image's pixels are covered by the gradient. The other settings control the direction, size, and style of the gradient. Gradients let you create smooth transitions of color or light. For example, you can create a gradient that transitions from a pink color to blue. For many styles of image editing, the Gradient tool is the best brush to use. It's been the only brush you can use to create gradients since version 2 of Photoshop. A Gradient fills the pixels in the layer where you've applied the gradient with the colors of the gradient. A Gradient lets you control the size, placement, direction, and shape of the gradient. The Shape tool lets you quickly create custom shapes that you can fill with colors, patterns or gradients. Like many of Photoshop's features, the Shape tool is useful in many ways. You can use it to create custom paths to fill with a gradient or pattern, create rounded corners, create a vector image, even draw lines that you can then fill with a pattern. You can even create custom shapes by tracing other shapes. For

After the launch last night, SpaceX engineer Elon Musk said that the Falcon 9 is usually designed to land on a barge in the ocean. It probably wouldn't have fit in the Atlantic. The Russian space agency Roscosmos' Soyuz-2.1b rocket took off from Europe's Guiana Space Centre, about 11 miles southwest of the capital of French Guiana, Kourou. The launcher is expected to fly to the International Space Station (ISS) in less than a week, on Saturday, 5 November. Germany, Austria, Canada, France and Japan are flying in the space station at the moment. This rocket launch will be the first time a Falcon 9 rocket has been launched from French Guiana. Elon Musk, founder of SpaceX, is still working to recover the first half of the rocket. Musk said during a press conference that the Falcon 9 booster that came back from Cape Canaveral in June had damaged its engine and the company decided to fly it away from the main structure as soon as possible. When flying, the rocket is powered by nine of its nine Falcon 9 engines. But the nine first stage engines do not need to be started at the same time. They can be fired one by one. "We can start any of the nine engines and fly. We didn't want to start all at the same time, so we start one engine, land the vehicle, start the next engine, fly, land and start a third engine. Then we land again and start a fourth engine," explained Musk during a press conference. The company has already announced the launch of the new Air Force Space Command 1 (AFSPC-1) satellite.15 November, 2012 Two Free Knit Patterns If you haven't checked out my website, now is the time. It has lots of free patterns for knitting, crochet and other crafts. I have also put together some books that you might find useful and have put a TV video on YouTube. Happy knitting!
