Tip You can save an image to your hard disk, but Photoshop may save the original file as an optimized JPEG file, so in the Save As dialog box, be sure that the target is set to create a copy of your file, not an optimized file. ## Postprocessing Photoshop is capable of so much that it includes a built-in utility that enables you to enhance your image postprocessing. This feature is a great tool for retouching professional images because the tools are easy to use and combine to create amazing results. The Photoshop Postprocessing feature opens a window on the editing screen that contains a number of tools, each with very specific purposes. This section explains how to use these tools and provides more tips for using them. Figure 15-2 shows the window containing the Postprocessing tools. Figure 15-2: The Postprocessing tools window in Photoshop. 1. When the window appears, go to the Adjustments toolbar and click the Recolor Artistic White Balance icon to open the tool window. The Recolor Artistic White Balance tool opens the White Balance window shown in Figure 15-3. The White Balance dialog box allows you to quickly adjust the white balance of the image based on a set of values. The white balancing tool creates a white balance matrix of the colors in the image. The color area in the palette section of the tool window displays the area of the image that was used to generate the matrix; the value and saturation areas of the palette section show the color values from the source area that were used to make the white balance matrix. The gray area of the palette displays the average color value of the colors in the image, which you can use

"brand" in "Patents et procès-verbaux de justice". The fact that the courtroom was seen as one of the "largest palaces in the world" was probably no accident, since the Ancien Régime monarchs typically constructed enormous stables in their palaces, and the best palace was where the king lived. They saw themselves as the court; the law was the state and the court was the reflection of the state to themselves. The opposite concept, "peuple de justice", was reflected in the practice of having the parlement, rather than the king, the primary judicial body in France. The architect of the great 17th-century Palais de Justice in Paris was the great court architect, Jean Bullant, who also did the cour d'appel of the Hôtel de Ville. Paris was the heart of the Enlightenment in France and Guillaume Dubois was the architect of the Palais Royal, another fantastic building. Napoleon reunited the "grande cour de justice" into a single one in 1804, under the direction of the great 19th-century architect Pierre-François-Léonard Fontaine, who also did the Palais de Justice in Paris. He continued its traditions of being a center of the Enlightenment. His practice was greatly admired by generations of lawyers and architects, and his influence in his day was considerable. Napoleon's revolutionary improvements were not perfect and the facade of the Palais de Justice was changed many times in the 19th century. It was finally completed in the 1970s. France today retains the original 18th-century layout. There are many precedents to this layout of the Palais de Justice. In the United States, the first federal courthouse built by the federal government was the US Capitol, built in 1793 by the architect, Pierre L'Enfant. It was patterned after the Louvre and has a very similar layout. The New York court house, built in 1793, was also a model for the Parisian court house. The layout is known to have been planned by Pierre L'Enfant, who also planned the palace at Versailles and for whom it was to be the royal residence.
