The great advantage of Photoshop is that it has a large community of online resources at www.google.com/duckduckgo. If you don't have access to a reliable Internet connection, Adobe offers a free tutorial at . Photoshop has an extensive Help feature, which can be accessed from File⇒Help or via the control panel. Photoshop has a well-deserved reputation of being a complex program. However, third-party applications (such as FilterForge, described in the following sections) offer an easier path into the program and offer many of the Photoshop-level commands that are available to advanced users. * * * Walking through Photoshop's layers The layers concept is the foundation of Photoshop's complex editing. You can perform any number of tasks with layers in Photoshop; in fact, you can see everything that's going on in your file as a collection of layers. You can print layers, delete layers, move layers, and even group them. You can even perform actions on layers — just make sure you know where the layer itself is, because actions are based on the layer's position in the document. To open layers, choose File⇒Layers, and you see a screen like the one shown in Figure 12-2. You can see that several layers are open in the image. Note that all the layers are seen in layers panel on the right side. They appear with names such as Duotone 1, Barn Door, and Litten. Instead of opening the layer panel, you can also open the Layers dialog box (File⇒Layers, or use the keyboard shortcut Ctrl+J). You can do some things to the layers via the Layers dialog box, such as hide, lock, and delete them. In addition, the Layers dialog box has a handy thumbnail of your image with a line drawn through the area that's considered visible (you can change the visibility of the line by checking the Select Visible check box). **Figure 12-2:** Layers are a fundamental part of the Photoshop editing process. Wondering where everything is? There is a shortcut key to bring up the Layer Panel (see Figure 12-2). Also, see the top right of Figure 12-2. When you click the Layers Panel toolbar button, the panel opens to the left

Let's tackle social media and the law 30 Jun 2005 by Andy Godsell Only a few years ago we saw little or no need to consider online reputation and legal consequences. Now it's a rare law firm to ignore the issue. But how do you know what's right, and how do you avoid making the wrong choices? Over the past few years, there has been an increasing awareness of the internet's potential to damage a business's reputation. From the 1995 'Stockholm convention' on the rights of electronic commerce, to more recent developments such as the European code of conduct for electronic commerce, firms have had to take the issue into consideration. This has given rise to a new field called 'internet law', which covers many of the issues involved in the use of internet-based services. The principal legal issues include: The EU's ecommerce directive, which sets out the rights of consumers and the responsibilities of businesses The rights of individuals when their personal information is published online and other legal issues Governments' power to regulate the internet (anti-terrorism measures, data protection and so on) and other issues, including individual jurisdiction Privacy The best known issues (i.e. that which have attracted the greatest awareness and legal action) relate to online reputation and privacy. The latter can be divided into two areas: when someone discloses information about you, or when information about you is published online. In some cases, individuals have had the law support them on the former. For example, in the US (and elsewhere), individuals can seek damages from individuals who post defamatory or embarrassing material about them. Where the focus has been on privacy, the issue has been much wider. Existing laws have been brought in line with the new technological realities, and new laws have been developed where legislation wasn't appropriate. Most likely, the most significant development was the creation of the EU's ecommerce directive in March 2000. The aim of the directive is to provide a uniform set of ecommerce rules across the European Union. It also states that ecommerce companies should provide consumers with clear and accurate information about their products and services.
