

Artificial Turf is used to describe sports grass, which is shorter. Artificial grass is the officially correct term for landscape grass, which is longer and fluffier. Back when AstroTurf was first invented we didn't make distinctions like this, because there was just one product.

The putting green is the area of the golf course that is nearest the hole. The area around the hole has been prepared specifically for putting. The USGA recently updated the rules regarding Putting Green. The USGA came up with a number of rules since golfers spend most of their time on the putting green.

When installing Home Turf on dirt or soil, you'll need a subbase. Using a shovel, clear the surface where your artificial grass will be placed. This can include removing any existing grass, roots, mulch, pine needles or other obstacles that could impact the artificial grass over time.

When installing Backyard Turf on dirt or soil, you'll need a subbase. Using a shovel, clear the surface where your artificial grass will be placed. This can include removing any existing grass, roots, mulch, pine needles or other obstacles that could impact the artificial grass over time.

With a Backyard [Putting Green](#) made from synthetic turf, you can work on your golf game anytime you want. Synthetic turf makes this a maintenance-free project—no worries about growing and caring for grass.
